

Resident Data Pricing

► Alesco's Resident Database – The most comprehensive database of residential addresses available.

- 135 Million Addresses
- Compiled From USPS Records
- Select By:
 - Zip Code
 - Carrier Route
 - Radius

Gain access to every household in the nation with our saturation Resident Database. Alesco Data's Resident Database is made up of more than 135,000,000 addresses throughout all 50 states, more than twice as complete as the next closest file. In fact, this database is so complete and accurate it was chosen by the U.S. Census Bureau for the 1980, 1990 and 2000 censuses!

An excellent choice for "saturation" mailings to all households in an area, our Resident Database allows you to select addresses by zip code, specific mail delivery routes or within a certain radius of your location. Labels are addressed to "Resident" instead of a name, which ensures the highest deliverability. We also offer the option of including a contact name, as available. Every Resident Mailing List is automatically pre-sorted and qualifies your mailing for the lowest possible postage rates.

Our Resident Database is compiled directly from U.S. Postal Service information and U.S. Census Bureau data. This file includes every street address, every post office box, every rural route address and every star route address in the nation.

Base Price \$25.00/M
